NEW SPARK PLUG AND DIESEL GLOW PLUG APPLICATIONS CATALOGUE FROM NGK

NGK Spark Plugs (UK) Limited, brand leader in the UK spark plug market, has announced the introduction of a new catalogue for 2004 (pictured) covering its full range of spark plug and diesel glow plug applications for passenger cars and light commercial vehicles.

The catalogue has over 100 new applications lines for spark plugs and includes seven new spark plug part numbers, three of which are iridium types to suit Ford, Mazda, Toyota and Mitsubishi applications. The other four new types are for Chrysler, Nissan and other Ford applications.

The size of the cross reference section has been substantially increased, with NGK stock numbers now shown alongside the part number in this section to assist customers who use this four digit code in their own stock/order systems.

The glow plug section incorporates the recent range extension of seven part numbers, including ceramic plugs fitted as Original Equipment as well as some additional models using existing NGK parts. Additionally, the Mercedes section incorporates images of terminal types to make selection easier for some Mercedes glow plugs.

“As brand leader in the UK spark plug market, NGK offers the perfect spark or glow plug for all passenger cars and light commercial vehicle applications,” says Brian Childs, Director of NGK’s Automotive Division. “NGK prides itself in providing a spark plug manufactured to the exact specification of the OE manufacturer for each and every vehicle application.”

The World's No.1 Spark Plug. Fact.
