NEW MOTORCYCLE APPLICATIONS CATALOGUE FROM NGK SPARK PLUGS

NGK Spark Plugs (UK) Limited, the leading spark plug manufacturer whose plugs are fitted as Original Equipment by nearly every motorcycle manufacturer in the world, has announced the introduction of a new motorcycle applications catalogue (pictured) for the year 2003.

The catalogue lists all motorcycles officially imported or manufactured in the UK and gives the stock numbers for both standard copper core and fine wire centre electrode plugs. The catalogue also contains a full range of spark plug caps.

A new additions and part number section at the front of the catalogue shows at a glance what new motorcycles and scooters appear for the first time (over 100). It also shows brand new spark plug part numbers that have recently been introduced along with their applications. This year the catalogue identifies separately the iridium plug for the application as well as platinum/gold palladium types. NGK iridium spark plugs are used by some of the world's leading racing teams and as Original Equipment in many high performance road and off road machines.

"Whether you are riding your bike around the town or on the race track, NGK offers the perfect spark plug for every motorcycle requirement," says Brian Childs, Divisional Director of NGK Spark Plugs (UK) Limited. "The heat range of NGK plugs is wider than ordinary plugs so that they are suitable for both high speed and low speed riding and, compared with conventional plugs of the same pre-ignition rating, they have more resistance to fouling."
